Natural Stone Carpets

Self Levelling

Epoxy Self Levelling Floors

Thanks to its extreme resistance to mechanical wear and chemical stresses, this cast floor is popular as a wear-resistant and fluid-tight finish in heavy-duty environments. Specific applications include garage workshops, printers workshops, warehouses, DIY Centre's, production halls in metal processing industries, chemical / food industries and storage sites for chemical waste.

Polyurethane Self Levelling Floors

The flexible and noise reducing properties make this cast floor highly suitable for decorative applications in domestic situations due to its soft structure underfoot and low maintenance properties.

It is also used extensively in exhibition halls, foyers, creches, classrooms, meeting rooms, hospitals, prisons and public spaces. Natural Stone Carpets polyurethane floor systems are 100% UV stable and astonishingly 100% organic because they are made from plant oils making this an environmentally friendly floor.

Over the last few years our Polyurethane Self Levelling Floors have become highly successful in the domestic sector with more and more people looking for that "minimalist look" in their home.

Both types of self levelling floors are 100% watertight, completely smooth yet they yield high non slip properties.

Properties

- Solvent free
- High non slip properties
- Colour-fast
- Excellent heat retention properties
- Compatible with under floor heating
- Low maintenance seamless finish

Colours

- Available in any RAL or Sikkens colour
